Configuration Audit Report

Inventory Tracker System - v1.1.0
Date: December 25, 2024
Auditor: Haileyesus Asrat (Documenter & Auditor)
Release: v1.1.0 (Feature Release)

1. Executive Summary

This Configuration Audit was conducted following the implementation of Change Requests (CR-001, CR-002, CR-003) to ensure full compliance with configuration management policies. The audit confirms that all approved changes have been correctly implemented, documentation is synchronized, and no unauthorized changes were introduced.

Audit Result: PASSED

2. Audit Scope & Criteria

The audit was conducted against the following five mandatory criteria:

Criteria	Verification Method	Status
1. Alignment with Approved Request	Compare implemented features against CR specifications.	✔ Compliant
2. Documentation & Baselines Updated	Check `CI_REGISTER`, `CHANGE_LOG`, and Git Tags (`BL2`, `v1.1.0`).	✔ Compliant
3. Testing & Verification Results	Review automated test logs and manual test evidence.	✔ Compliant
4. Check for Unauthorized Changes	Diff `v1.1.0` against `v1.0.0` to identify unapproved code	✔ Compliant
5. Functional & Physical Audits	Perform comprehensive FCA and PCA.	✔ Compliant

3. Physical Configuration Audit (PCA)

Objective: Ensure "as-built" software matches the "as-designed" configuration items and documentation.

3.1 Repository & Documentation Integrity

- Repo Structure: Matches `README.md` and `CI\_REGISTER.md` definitions.
- CI Verification: All 20 Configuration Items (CIs) are present and correctly named.
- Baseline Updates:
 - BL1 (Baseline 1) tag exists.
 - BL2 (Baseline 2) tag exists and points to the latest verified commit `f130c33`.
- Release Documentation: `releases/v1.1.0.md` is complete and accurate.

3.2 Unauthorized Changes Check

- Method: `git diff v1.0.0..v1.1.0 --name-only`
- Findings:
 - Modified: `src/app.py`, `src/templates/dashboard.html` (Authorized by CR-001, CR-002, CR-003)
 - New: `src/templates/users.html`, `tests/test\_cr\_implementation.py`, `users.json` (Authorized by CR-003)
 - Unexplained Files: None.
- Result: No unauthorized changes detected.

4. Functional Configuration Audit (FCA)

Objective: Verify that the software features meet the specific requirements of the approved Change Requests.

4.1 Implementation Alignment (Approved vs. Implemented)

CR ID	Approved Request	Implemented Feature	Alignment
CR-001	Item Editing & Tracking	/edit route, Edit Modal, Audit Trails	Exact Match
CR-002	Search & Filter Logic	Search Bar, Quantity Inputs, Auto-submit JS	Exact Match
CR-003	Role Management (RBAC)	Admin/Manager/Viewer roles, `users.json`, Access Control	Exact Match

(Note: In Word, select the above lines and use "Insert > Table > Convert Text to Table" with tabs as separator, 4 columns.)

4.2 Testing & Verification

- **Automated Tests:**

- Suite: `tests/test\_cr\_implementation.py`
- Results: 3/3 Passed (Validation of Edit, Search, and Role Logic).

- **Manual Verification:**

- Verified "Viewers" cannot see "Add Item" form.
- Verified "Admins" can access `/users` page.
- Verified "Real-time search" updates table instantly.

5. Conclusion

The Inventory Tracker System v1.1.0 has successfully passed both Physical and Functional configuration audits.

1. Compliance: Implementation aligns 100% with approved CRs.
2. Integrity: Documentation and Baselines (`BL2`) are fully updated.
3. Security: No unauthorized changes were found.

Recommendation: The release is certified for deployment.
